

## Are you between the ages of **55 and 85**?

You may be eligible for a new randomized controlled study looking at the use of infrared light to increase blood flow in the brain in people with **Traumatic Brain Injury (TBI)**. We will also study if this treatment improves executive function in these individuals.

We are looking for two groups of people:

- **People with TBI**: the study involves multiple visits over the course of 4-5 months
- **Healthy controls**: the study involves one visit with an MRI

Payment is available for those who qualify and complete the study.

For more information and to see if you are eligible, please contact:
