

Recruiting Subjects with Aphasia after Stroke for Research Study on Effects of Neuro Device stimulation

Participants wanted for an investigation of non-invasive brain stimulation combined with speech therapy!

Week 1:

Two (2) baseline evaluations (each 1.5 hours)

Week 2:

Diagnostic visits (1-3 hours long) to assess neurological status and linguistic/cognitive skills, including a functional MRI, before the Neuro Device intervention is provided

Week 3 & 4:

Ten (10) therapy sessions, one (1) hour each, over two (2) weeks

Additional:

Three (3) follow-up evaluations

Must be 18-80 years of age AND be diagnosed with aphasia after a stroke at least six (6) months ago.

Location

The Abilities Research Center
Rehabilitation & Human Performance Department
5 East 98th Street, SB-18, New York NY, 10029
